

**STRONG PARTNERS. TOUGH TRUCKS.™**

## **Laden Container Handling Trucks**

H40-50XM-16CH  
40 000-50 000 kg @ 1600 mm

## Built on Experience

The H40-50XM-16CH range of dedicated container handlers is the 6th generation of a proven machine. These trucks build on more than 40 years of Hyster experience in providing solutions to the container handling industry.

- Container handlers equipped with a mast are receiving renewed interest from terminal operators, because these 'first row container stackers' perform container shunting operations faster than most reachstackers.
- The 'masted' Hyster H40-50XM-16CH trucks represent a refreshing concept, purposely developed to deliver these high 'box-rates' in first row stacking operations, at the lowest possible operational costs.
- The location of the operator compartment – towards the rear of the machine - is unique and unconventional.
- Although well accepted on empty container handlers, Hyster was the first manufacturer to apply the rearmounted cab concept for laden container handlers, as it provides truly excellent all-round visibility.
- The key benefit of this layout is that any obstruction to the operator's forward visibility is greatly reduced. Forward visibility is comparable to most reachstackers. Rearward visibility is outstanding.

- The H40-50XM-16CH series of 'first row container stackers' have been developed using the experiences gained through the manufacture to-date of over 1000 Hyster 'masted' container handlers.
- Constructed using proven components, these trucks feature the chassis and the complete drivetrain of the Hyster ReachStacker.
- The Hyster designed 'Vista' mast, the supremely simple dedicated carriage and the container spreader are proven components, as featured on hundreds of Hyster container handlers, which have been in operation for many years.
- The machine features the Hyster 'Vista' operator compartment, as offered on other Hyster products. It has industry-leading ergonomics, and provides superior driver comfort and excellent all-round visibility.

## Visibility

- The rear-mounted cab position offers an optimum level of all-round visibility that is unique in this product segment.
- The driver is able to maintain a complete 40ft container in his line of sight, during the entire handling operation with minimal head movement.
- The driver has an excellent view of the job at hand, not only thanks to the cab position itself, but also the extensive glass area and the position of the dash display (mounted on the right hand side). Upward visibility is also virtually free from obstruction, thanks to a clever overhead guard design.
- The 'Vista' mast has extremely wide-spaced channels that allow for greater visibility.

## Performance

Fast, economic handling is the prime benefit of the Hyster 'first row stacker' container handler.

- Due to the simplicity of the 'straight lift' mast movement and high lifting speeds, these container handling machines perform 'container-shunting' operations faster than most reachstacker type machines.
- The fastest spreader (dis)engagement to/from containers is enhanced by the spreader's floating twistlocks, free mechanical articulation and sideshift movement. Automatic twistlock locking, the lift- and overlowering inhibitor and spreader rotation and reach are all important standard features that help boost productivity.
- Automotive style driver layout and logical joystick type combi-control help the operator to sustain a high performance level.
- Endurance is also provided through the truck's cooling system that is suitable for operation in ambient temperatures up to 50°C. The hydraulically driven cooling fan only operates on-demand, consuming less energy, improving fuel economy and reducing average noise.

## Power and Performance

### Stage IIIB engine:

For use mainly within EU (European Union) countries, trucks with Stage IIIB diesel engines have significantly reduced exhaust gas emissions. Also by applying Hyster Intelligent Design criteria, these trucks are not only cleaner running but also more economical, achieving up to a 20% fuel saving.

- The new Stage IIIB compliant Cummins QSL9 9-litre engine has a maximum performance of 276 kW (370 Hp) at 1900 rpm and maximum torque of 1491 Nm at 1500 rpm.
- The transmission available as standard with the engine is the TE-27 series, with the TE-32 available as an option, featuring 4-speeds with APC216 automatic gear shifting, protective forward-reverse shifting lock-out and transmission protection system.

**NOTE: A Stage IIIB engine must run on Ultra Low Sulphur Diesel (ULSD) fuel, with a maximum of 15 ppm sulphur content. Diesel fuel with a higher sulphur content than 15 ppm will compromise the emissions performance of the Stage IIIB engine and may result in damage to components.**

### Stage IIIA engine:

This existing diesel engine conforms to Stage IIIA emission standards and will be supplied into markets where the NRMM (Non Road Mobile Machinery) Stage IIIB legislation does not apply.

- The Stage IIIA Cummins QSM 11 6-cylinder diesel engine features a turbo-intercooler engine delivering 224 kW (300 Hp) at 1800 - 2100 rpm.
- Very smooth torque characteristic, with max. 1424 Nm between 1000-1400 rpm, resulting in excellent lifting and acceleration power, combined with low fuel consumption.
- Engine protection system, with derate function on high coolant temperature and/or low oil pressure.
- Heavy-duty air cleaner, with two-stage filter plus a cyclonic pre-cleaner, suitable for dusty operating environments.
- Cooling system suitable up to 50°C. The hydraulically driven cooling fan only operates on-demand, consuming less energy, improving fuel economy and reducing average noise.
- Fuel Tank: 890 litres.

### Transmission

- The S.O.H. model TE-27 powershift transmission has fully automatic 'APC216' soft-shift 4-speed gear change and an electronic 'inching' function, plus a protective lock-out, to help prevent forward to reverse shifting while on the move.
- Back-up alarm sounds when in reverse gear.

### Axles

- Drive axle with double reduction and one-piece drive shafts, with multiple wet disc brakes with cooling system.

### Brakes

- Service brakes: Oil cooled, multiple wet disc brakes on the front wheels, hydraulically charged by accumulator, with cooling system.
- Parking brake: Spring actuated and hydraulically released, acting on the drive shaft. Parking brake is automatically applied when hydraulic pressure falls below 100 bar.
- Steer axle with single steering cylinder and nonadjustable tie-rods. Wheel nut protection.
- 18.00 x 25 wheels fitted all-round.

## Hydraulic System

- E-hydraulics, proportional controls and optional soft start / stop improve controllability and durability.
- Pumps: Two variable-displacement piston pumps, with a total performance of maximum 585 l/min.
- Hyster two-speed system with regenerative function results in high lift speeds.
- Leak-free ORFS (O-ring) type fittings are used throughout the whole machine.
- When hydraulic temperature is too low for operating conditions, the engine will derate. To prevent overheating of the hydraulic oil, an option is available which will reduce truck speed, giving time for the oil to cool down to the correct operating temperature.
- Filtration: Extremely efficient filtration, with new breathers. Full-flow return line filter with 5 micron cartridge on the main system, plus in-line pressure filter with 5 micron on power assist and support systems.
- Large oil cooler for the hydraulic system, suitable for working in ambient temperatures of up to 50°C.
- 6000 hrs oil service interval means lower service cost.
- Hydraulic oil tank: 600 litre useable volume, with level and temperature gauge and magnetic drain plugs, providing additional cooling and reserve capacity.
- Hydraulic control program for easy status and diagnostics and custom settings. Hydraulic temperature protection means lower service costs and improved uptime.

## Spreader Specifications

Hyster 20'-40' Telescopic top lift spreader for handling ISO containers with a height of 8' to 9'6", features:

- Pendular floating ISO twistlocks.
- Automatic twistlock locking (manual locking also possible). Unlocking is done manually.
- 434 mm total sideshift - 217 mm each side.
- 5° Free mechanical sideways articulation (horizontal self-levelling).
- 9° Hydraulic powered slew (4.5° each side) or 210 mm of forward / backwards reach movement.
- Twistlock indicator flags on the spreader corners.
- Twistlock indicator lights in the cab, and on the spreader.
- Twistlock lock-out device, built into the spreader, to help prevent: - engaging a container by less than 4 corners, - unlocking when carrying a container.
- Lift interrupt system, to prevent lifting a container with partially turned twistlocks.
- Anti-slack function to help prevent the mast over-lowering / the lift chains slackening.
- 'Gather guides' near the two rear twistlocks, for easier spreader engagement.
- 4 Lifting eyes, on the 4 corners of the end-beams of the telescopic container spreader, for lifting general cargo.
- 2 Wide-beam work lights on the spreader, pointed to the rear twistlocks.

# Operator Compartment

**Hyster 'Vista' cab with industry leading comfort and visibility.**

## Comfort

- Optional air-conditioning with manual temperature control or climate control.
- Filtered fresh air inlet.
- Heater with 3-stage blower.
- Spacious rubber floored, easy to clean operator compartment is mounted on anti-vibration isolators and features a low noise level of only 73 dB(A) at drivers ear.
- Fully adjustable suspension seat with armrests, high backrest and safety belt. (Optional: air-suspension seat).
- Sliding windows in cab doors.
- Door locking device while driving with the doors open.

## Controls

- Seat mounted console with joystick.
- Joystick control for lift, tilt and spreader functions - sideshift, rotation / slewing and reach / retract. (twistlock locking is automatic). Proportional control for spreader rotation function. Functions operated by separate toggle switches are spreader telescoping and twistlock unlocking.
- Directional lever with forward / reverse shifting protection.
- Auto-shift function (manual shifting possible).
- Finger light steering. Steering column adjustable in height and angle. Small steering wheel with spinner knob.
- Responsive hydraulic brakes and automotive style pedal layout.
- Automatic 'throttle-up' function when lifting: When operating the lifting function, either when not in gear or when the inching pedal is pushed, the engine automatically revs up to 1800 rpm. When in gear, the 'auto-throttle-up' function is deactivated. This gives additional fuel savings as the optimum engine rpm is 'auto-matched' to the hydraulics performance requested by the operator.
- Optional drive speed on load limits vehicle speed between 7 km/h and maximum speed, depending on load weight and height. It can be set to user preferences.
- Improved controllability of functions:
  - Optional pre-defined user modes (smooth, medium, or direct).
  - Optional soft start/stop of hydraulic functions.

### Visibility

- Extensive glass area. Lightly tinted glass.
- Clever overhead guard design.
- Effective hot air demister system with various outlets.
- Wipers and washers on front, top and rear window.  
Large front window with effective H-shape twin wipers.  
Two panorama type rear view mirrors.
- Spreader indicator lights positioned at the front cab roof.

### Instruments and Controls

- Conveniently side-positioned dash display with central warning device on steering column.
- Analogue display for: Hour meter, Fuel level, Battery charge, Engine oil pressure and coolant temperature, Transmission pressure and temperature.
- Warning lights for: Lights on, Wiper and washer functions, Battery charge, Low brake pressure.
- Audible warning for: Low brake pressure, Back up alarm when in reverse gear.

### Electrics

- 24 V system, 70 A alternator, battery 200 Ah (20 hr.).
- All sealed connectors.
- Battery master switch.

### Lights

Extensive Light kit, consisting of:

- 4 front working lights on the cab, halogen, for 20' and 40' positions.
- 2 rear facing working lights, halogen, on the cab.
- 2 drive lights and 2 front marker lights.
- 2 tail and stop lights.
- 4 direction indicator lights.
- Orange flashing beacon on the cab.
- Two wide beam working lights, halogen, on the container spreader.

## Optional Equipment

- 2-High stacking configuration: Equipped with min. 4270 mm BOF lift height mast (lowered height 5106 mm). Fitted with a 650 mm lower cab position (to enable clear through mast visibility underneath a 2-high raised 9'6" high container). Includes tilting cab for service access.
- Special paint (RAL) colour(s).
- Radial type tyres.
- Central greasing system, on truck and spreader.

### Operator convenience / cab options:

- Mast tilt indicator (mechanical).
- Deluxe air suspended seat, instead of mechanically suspended seat. Also available with seat heating.
- Air-conditioning system integrated into the heating and ventilation system. It is available with either manual temperature control or climate control. Sunshade screens are fitted on the top and rear windows.

### Spreader options:

- Half-high mounted dedicated carriage & spreader, to also handle 4' and 4'3" half-height containers. A mast with min. 1.22 m more lift height is selected to keep the same total maximum container stacking height.
- Extra load distance of 127mm on a high-mounted dedicated carriage & spreader. The extra distance may facilitate easier handling from/on wide railway wagons.
- 30' Automatic stop, required for handling (a) 30' container(s).
- 4 Extra lifting eyes underneath the centre of the spreader.  
(Note: 4 corner lifting eyes are standard)

## Service Access

- Engine and transmission check points are directly accessible via two top covers.
- Engine, transmission and hydraulic components are easily accessible by lifting off the aluminium top covers.
- Large compartments doors and openings are situated on both sides of the machine.

Specification data is based on VDI 2198

## Equipment and weight:

Weights (line 2.1) are based on the following specifications: Complete truck with cab, pneumatic tyres, mast as specified, dedicated carriage and 20' – 40' spreader.

# Truck Dimensions

- r1 = radius of swing of container rear corner
- r2 = radius of swing of container front corner
- Wa = outside turning radius of the truck
- a = total operating clearance, a/2 is operating clearance at each side
- a = 10% of V
- V = (theoretical) 90° stacking aisle width, no intrusive stacking
- = r2 + the larger of r1 or Wa
- Ast = (practical) 90° stacking aisle, no intrusive stacking and with clearance
- = V + a = V + 10%

**NOTE:**

Specifications are affected by the conditions of the vehicle and how it is equipped, as well as the nature and condition of the operating area. If these specifications are critical, the proposed application should be discussed with your dealer.

◆ Gradeability figures (line 5.8) are provided for comparison of tractive performance, but are not intended to endorse the operation of the vehicle on the stated inclines. Follow instructions in the operating manual regarding operation on inclines.

† Drawbar pull performance figures are only indicative for comparison purpose. These performances are only possible for a short period of time.

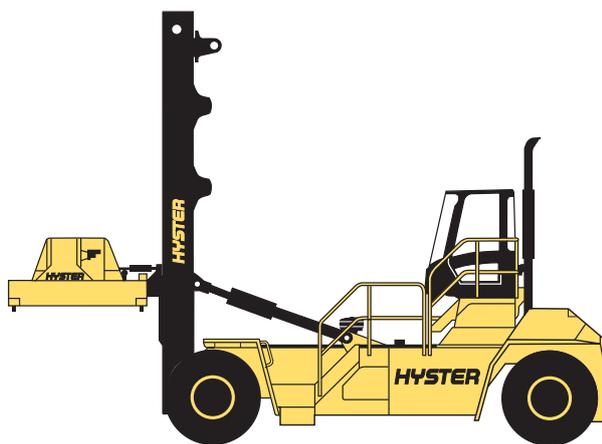

● Lift speeds with 365kW engine

✦ LPAZ, measured according to the test cycles and based on the weighting values contained in EN12053

All specifications and capacities quoted in the mast and capacity information tables are valid for trucks equipped with a Hyster container handling attachment and for handling ISO containers, which are 8' wide and 8'6" - 9'6" high.

Hyster products are subject to change without notice. Lift trucks illustrated may feature optional equipment. The capacities quoted are in conformance with standards ISO 1074 and 10525.

**CE Safety:** This truck conforms to the current EU requirements.

## Mast and Capacity Information

- Stacking heights up to 5-high 9'6" containers.
- Ability to stack up to 40 tonne containers.
- Hyster 2-stage 'Vista' mast has large channel overlaps to ensure excellent strength and durability and to minimize flexing during stacking.
- Wide mast and front axle gives immensely improved forwards visibility and added sideways stability for stacking heights up to 5-high 9'6" containers.
- Uniquely simple routing of the hydraulic functions over the mast to the spreader, by only two hoses and two cables.

	Stacking height & container height	Recomm. Mast lift height BOF (mm)	Mast lowered height (mm)	Maximum under twistlocks (mm)	H40XM-16CH	H44XM-16CH	H48XM-16CH	H50XM-16CH

\*5-High mast and the H50.00XM-16CH are with: Heavy Duty mast and 30 mm extra load distance on dedicated carriage

## Strong Partners, Tough Trucks, for Demanding Operations, Everywhere.

Hyster supplies a complete range of warehouse equipment, IC and electric counterbalanced trucks, container handlers and reach stackers. Hyster is committed to being much more than a lift truck supplier.

Our aim is to offer a complete partnership capable of responding to the full spectrum of material handling issues: Whether you need professional consultancy on your fleet management, fully qualified service support, or reliable parts supply, you can depend on Hyster.

Our network of highly trained dealers provides expert, responsive local support. They can offer cost-effective finance packages and introduce effectively managed maintenance programmes to ensure that you get the best possible value. Our business is dealing with your material handling needs so you can focus on the success of your business today and in the future.
