\oplus = Centre of gravity of unladen truck
 $A_{st} = W_a + R + a$ (see lines 4.34.1 & 4.34.2)
 $R = \sqrt{(l_6 + x)^2 + \left(\frac{b_{12} - b_{13}}{2}\right)^2}$
 a = Minimum operating clearance (VDI standard = 200 mm, BITA recommendation = 300 mm)
 l_6 = Load length

NOTE: To calculate truck capacities with alternative truck specifications to the ones shown in the above tables, please consult your Hyster dealer. The rated capacities shown are for masts in a vertical position on trucks equipped with standard or sideshift carriage and nominal length forks. Masts above the maximum fork heights shown in the mast table are classified as high lift and, depending on the tyre/tread configuration may require reduced capacity, restricted back tilt or wide tread.

(1) Add 666mm with load backrest extension.
 (2) Deduct 666mm with load backrest extension.
 (3) Add 684mm with load backrest extension.
 (4) Deduct 684mm with load backrest extension.
 (5) Add 583mm with load backrest extension.
 (6) Deduct 583mm with load backrest extension.
 (7) Add 601mm with load backrest extension.
 (8) Deduct 601mm with load backrest extension.

To calculate truck capacities with alternative truck specifications to the ones shown in the above tables, please use the World Wide Rating Program.

NOTES:

Specifications are affected by the condition of the vehicle and how it is equipped, as well as the nature and condition of the operating area. Inform your dealer of the nature and condition of the intended operating area when purchasing your Hyster® truck.

NOTICE:

Care must be exercised when handling elevated loads. Operators must be trained and must read, understand and follow the instructions contained in the Operating Manual.

All values are nominal values and they are subject to tolerances. For further information, please contact the manufacturer.

Hyster products are subject to change without notice.

Lift trucks illustrated may feature optional equipment. Values may vary with alternative configurations.

CERTIFICATION: Hyster lift trucks meet the design and construction requirements of B56.1-1969, per OSHA Section 1910.178(a)(2), and also comply with the B56.1 revision in effect at time of manufacture. Certification of compliance with the applicable ANSI standards appears on the lift truck. Performance specifications are for a truck equipped as described under Standard Equipment on this Technical Guide. Performance specifications are affected by the condition of the vehicle and how it is equipped, as well as by the nature, condition of the operating area, proper service and maintenance of the vehicle. If these specifications are critical, the proposed application should be discussed with your dealer.

NOTE: Specifications, unless otherwise listed, are for a standard truck without optional equipment.

Specification data is based on VDI 2198.

Safety: This truck conforms to the current EU, ANSI and UK CA requirements.
