Spacious cab, responsive motor and a smooth steering system

ELECTRIC SOLUTION FOR ICE PERFORMANCE

- Generous through mast visibility
- Competitive top speed
- Competitive lift speed
- Large battery capacity (35 kWh)
- Low noise levels
- Integrated Hyster® lithium-ion battery

Discover the versatile, electric counterbalanced J40-70XTLG series. This truck series stands out as it is ideal for both indoor and tough outdoor applications. Select the 115V or 154V electrical system, based on the requirements of your application.

This durable model features a compact lithium-ion battery and a permanent magnet motor integrated with the drive axle. This forklift truck performs like an ICE, but without emissions and noise, and with low maintenance and lower cost of operation.

WHAT MAKES THIS ELECTRIC TRUCK A GREAT OPTION?

- Environmental reasons: either to adhere to governmental emission regulations or personal preference and objectives to become more environmentally friendly.
- Large tires allow for usage both indoors and outdoors.
- Lower TCO: compared to an ICE equivalent truck, energy costs can typically be halved. Meaning lower running costs and more movement for the same amount of money.
- Lithium-ion battery reduces the need for battery servicing.
- The lithium-ion powered engine reduces noise pollution, helping to achieve a better working environment.
- Where the truck and battery perform within the recommended warranty terms and conditions, the battery will carry a warranty assuring the customer that a minimum of 70% rated capacity will remain for 5 years.
