# HIGH VISIBILITY CABIN

Work conditions and long hours can be tough on operators, but through smart design, the state-of-the-art operator cabin on Hyster® lift trucks is equipped to keep your operators comfortable and productive throughout a shift.

Equipped with an armoured glass top window, curved front and rear windows and steel doors with tempered glass, the Hyster operator cabin provides operators excellent all-around visibility. The curved and tempered glass is much stronger and less subject to vibration and noise than flat glass. Unlike many cabs offered in the industry, the Hyster cabin contains scratch-resistant glass all-around.

# ADAPTABLE TO YOUR OPERATOR NEEDS

With the largest cabin entry area in the industry, the Hyster cabin provides ample space for operators of most sizes to easily and more comfortably enter and exit the cabin. Once inside, operators enjoy the comfort of a spacious cockpit style cabin that keeps all truck information and controls within reach.

An industry exclusive lateral sliding seat, coupled with an easily adjustable steer column with foot pedal, allows the operator to efficiently change line of sight to achieve the vantage point of the fork tips depending on the load.

## INTEGRATED PERFORMANCE DISPLAY

A 7 inch full-color Integrated Performance Display provides truck performance data in one clear screen. This multi-function touchscreen gives the most relevant information to the operator in a clear manner, offers onboard diagnostic capabilities, and is easily programmable and customizable for various operator skill levels.

XD SERIES OPERATOR CABIN

# WE KNOW OPERATOR COMFORT

A variety of seat configurations are offered to suit operator preference including mechanical or air suspension, cloth or vinyl cover, lumbar support and ventilated or heated seats.

Operators can stay connected and charged with up to 2 USB Ports located in the control arm and behind the seat with a AC/DC power outlet.

The air conditioning system can be pre-set for automatic climate control, as well as easily adjusted through the Integrated Performance Display or from the panel on the control arm. The unique high and rear louvers provide direct air flow toward the operator.

The control arm features an ergonomic wrist cushion and is fully adjustable to the operator's preference. Modular in design, it can accommodate almost any possible configuration and is easily serviceable.

Forward and reverse control is also available through the optional ergonomically designed joystick, which can be integrated in the control arm for easy and intuitive operation of hydraulic functions.

The operator cabin on the XD series is equipped with many features as standard and a host of other optional features to enhance operator comfort and productivity.
